

DEPARTMENT OF BIOCHEMISTRY

BICM 101*

Credits 3(2 + 1)

PRINCIPLES OF BIOCHEMISTRY AND BIOTECHNOLOGY

Theory

Biochemistry - Introduction and importance Bio-molecules - Structure and Properties - Amino acids, peptides and proteins. Enzymes, lipids, Carbohydrates, *Nucleotides* and Nucleic acids. Metabolic energy and its generation - Metabolism - Basic concepts, Glycolysis, Citric acid Cycle, Pentose phosphate pathway, oxidative phosphorylation, Fatty acid oxidation. General reactions of amino acid degradation. Photosynthesis. Biosynthesis - carbohydrates, Lipids, Proteins and Nucleic acids. Metabolic regulation.

Biotechnology - ancient and Modern Biotechnology, Scope and importance in crop. Improvement, Plant cell, tissue and organ' culture, Basic principles of Recombinant DNA. Technology, Transgenic plants (GMO's) - challenges, achievements and applications, Social aspects of Biotechnology.

Practicals

1. Amino acid model, R.S. Configuration, Ninhydrin test
2. Paper electrophoresis, Xanthoproteic test, Millon's test, Glyoxylate test
3. Identification of protein components, Biruret test, secondary structure of proteins (a) helix & (b) pleated sheet (Models). Protein denaturation - heat, pH, precipitation of proteins with heavy metals, immune reaction
4. Enzyme kinetics, data-plotting the graphs, competitive inhibition, enzyme immobilization
5. Extraction of nucleic acids, column chromatography of RNA hydrolysate
6. Models of sugars, sucrose & starch (atomic & Paper)
7. Quantitative determination of sugars after removal of interfering substances
8. Paper chromatography for the separation of sugars, scheme for the identification of unknown carbohydrate
9. Fatty acid model, characterization of lipids by T.L.C.
10. Enzyme induction
11. Requirements for plant tissue culture laboratory
12. Techniques in plant tissue culture

13. Media composition and preparation
14. Media components and preparation
15. Agro bacterium mediated gene transfer
